

Zen Space® for Airports

Turning passenger recovery into measurable airport value

A premium, compact relaxation solution for modern terminals

Zen Space
YOUR MOMENT

www.ZenSpaceWorld.com

Passenger Stress Is an Airport Experience Problem

Today's airports are complex, fast-paced environments that put constant pressure on travellers.

- 1 Noise, queues, delays and time pressure increase passenger anxiety.

- 2 Stress reduces satisfaction, dwell quality and discretionary spend.

- 3 Airports need compact, post-security recovery solutions that are easy to test and measure.

The Opportunity: Transform Waiting Time into Recovery Time

Travellers already spend time waiting. Zen Space helps airports turn that time into a calmer, more valuable passenger experience.

1 Travellers already spend time waiting.

2 Airports can convert stressful dwell time into a premium passenger experience.

3 A recovery space can support satisfaction, differentiation and non-aeronautical revenue.

4 Zen Space makes this measurable through a pilot model.

A Fully Automated Passenger Recovery Pod

A compact, premium recovery experience designed for modern terminals.

Private-feeling, soundproof wellness pod

10–20 minute fully immersive relaxation sessions

Full body Shiatsu massage including reflexology as well as sound, visual and aroma therapy

Fully automated and operationally simple

Patented Zen Space technology

Designed Around the Airport Environment

Zen Space is specifically suited to modern terminal environments where space, time and operational simplicity matter.

Compact: 2.9 m² footprint

Fast: 10–20 minute sessions fit passenger dwell time

Simple: automated use, minimal staffing burden, certified for airport and public spaces

Premium: improves perception of care and innovation

Measurable: usage, feedback and revenue can be reviewed

A Passenger Experience Upgrade with Commercial Upside

Zen Space creates value for airports by improving passenger experience while supporting broader commercial and operational objectives.

Passenger satisfaction

Enhances comfort and helps improve the overall terminal experience.

Non-aeronautical revenue

Creates a new premium revenue opportunity from passenger dwell time.

Retail and lounge ecosystem support

Complements adjacent airport services and enriches the overall passenger offer.

Brand differentiation

Positions the airport as innovative, passenger-centric and wellness-forward.

Operational simplicity

Compact, automated and easy to integrate with minimal staffing burden.

Validated with Real Users Before Airport Rollout

Proven in a live commercial environment before airport deployment

3,000+ users

Trusted by thousands in everyday use

100% customer satisfaction

Consistently rated excellent by all users

Live commercial environment

Operating successfully in a real public space

Real customer feedback

Positive insights driving continuous improvement

Strong transferability to airports

Designed to meet the needs of modern travelers

Real users. Real environment. Real proof before airport rollout.

A 12-Month Airport Recovery Pilot

Start with one or more pods, measure real passenger response, then decide whether to extend or scale.

Fully supported launch

We handle delivery, installation, training and ongoing support.

Usage and customer feedback tracking

Real-time data and passenger insights to measure impact.

Revenue and operational review

Evaluate performance, financial results and operational fit.

Clear decision point after 12 months

Review outcomes together and decide to extend, scale or conclude.

No need to commit long-term

No long-term commitment required before results are proven.

3 Flexible Partnership Models

Built Around Your Airport's Goals

Choose the commercial approach that fits your strategy.

Partnership first. Tenancy always an option.

1

Airport-Supported Investment

The airport invests and owns the pods.
Zen Space provides technology,
installation and ongoing support.

- ✓ Airport funds and owns the assets
- ✓ Zen Space handles installation, technology and maintenance
- ✓ Custom branding & full support
- ✓ Revenue fully retained by the airport
- ✓ Maximum control and flexibility

Best for: Full control and ownership

2

Shared Investment Model

Airport and Zen Space share the investment
and the upside.
We operate together, we grow together.

- ✓ Shared capital investment
- ✓ Aligned incentives and joint ownership
- ✓ Shared revenue based on agreed terms
- ✓ Faster deployment with scalable upside
- ✓ Long-term partnership approach

Best for: Strategic partnerships

3

Zen Space-Operated Pilot

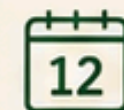

Zen Space invests, installs and operates
the pods.
The airport provides the space.

- ✓ No capital investment required
- ✓ Full operational management by Zen Space
- ✓ Airport receives revenue share
- ✓ Low risk, easy to launch and test
- ✓ Ideal way to start and measure impact

Best for: Fast, low-risk pilots

All models are designed for a 12-month pilot, with a clear review at the end
to decide whether to extend, scale or conclude.

12-Month Pilot

Clear. Measurable. Low Risk.

Low-Friction Deployment in Airport Environments.

A compact, operationally simple solution designed for efficient airport integration.

2.9 m² per cabin

Standard electrical / industrial outlet

Approx. 6-hour installation per cabin

Designed for airport safety requirements

Minimal operational burden

Easy to integrate into terminal infrastructure

Non-Aeronautical Revenue Potential

Proven performance is validated through real usage, and airport locations with strong visibility and 24h daily operation can generate meaningful additional revenue potential.

KEY ASSUMPTIONS

 Session pricing €15 / €30 10- / 20-min session	 Pricing mix used 50% / 50% 10-min / 20-min sessions	 Airport forecast usage 24 / 36 / 48 users per pod per day	 Operating environment 24h daily airport operation
--	---	---	---

POTENTIAL ANNUAL REVENUE PER POD

	Conservative Scenario 24 users per day	Moderate Scenario 36 users per day	High Scenario 48 users per day
 PROVEN REFERENCE Shopping Centre Environment			
 Visitors per year: 1M	 8,760 sessions / year (24 × 365 days)	 13,140 sessions / year (36 × 365 days)	 17,520 sessions / year (48 × 365 days)
 Average users per pod / day: 12 users			
 Real usage reference	Annual revenue per pod €197,100 / year	Annual revenue per pod €295,650 / year	Annual revenue per pod €394,200 / year

 Meaningful upside from non-aeronautical revenue streams	 Validated usage benchmark	 High-visibility airport locations support stronger throughput	 24h operations increase monetisation potential	 Strengthens airport differentiation and commercial value
--	--	---	---	---

i Revenue is based on:
✔ Session pricing: €15 for 10-minute sessions and €30 for 20-minute sessions
✔ Pricing mix: 50% 10-minute sessions / 50% 20-minute sessions
✔ Proven reference: 12 users per day in a shopping centre with 1M annual visitors
✔ Airport scenarios model: 24, 36 and 48 users per pod per day
✔ 365 operating days and 24h daily airport operation

Figures represent potential scenarios based on current data and industry benchmarks. Actual results will vary by airport, location and operational model.

Why This Is the Right Time for Airports

A stronger passenger experience and a more measurable commercial opportunity can now be tested with low risk.

Passenger experience is now a competitive differentiator

Airports are under pressure to grow non-aeronautical revenue

Travellers value calm, privacy and recovery during journeys

Zen Space offers a measurable, low-footprint way to test this category

A practical way to strengthen passenger experience while exploring new non-aeronautical value.

Partnership-first, measurable and easy to trial.

Let's Launch a 12-Month Airport Recovery Pilot

Zen Space removes long-term risk by offering a **fully supported pilot** that validates passenger satisfaction, usage, operational fit and commercial performance before any wider rollout.

Low risk, high insight

Test real passenger demand with zero long-term commitment.

Measure what matters

We track satisfaction, usage and revenue impact.

Quick to deploy

Plug-and-play setup with minimal disruption to operations.

Enhance passenger experience

Give travellers a moment to recover, relax and arrive better.

Grow non-aeronautical revenue

Unlock a proven, high-margin revenue stream.

Fully supported by Zen Space

We manage installation, operations, maintenance and reporting.

Let's schedule a short working session

to identify the ideal terminal location and pilot setup for your airport.

YOUR MOMENT

THANK YOU!

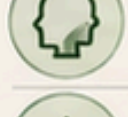

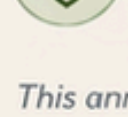

A practical step toward calmer passengers,
stronger airport experience and measurable non-aeronautical value.

Scientific Evidence Supporting Zen Space's Impact

Multiple independent studies across neuroscience, psychology, medicine and environmental health demonstrate that sound-proof relaxation, guided massage and immersive multisensory environments reduce stress, improve mental performance and enhance overall well-being.

	Neuroscience of Relaxation (2020)	Relaxation techniques enhance cognitive function and improve focus, enabling the brain to be more alert and engaged.
	Journal of Environmental Psychology (2018)	Sound-masked environments reduce stress and restore attention, lowering cortisol levels and promoting mental recovery.
	Psychological Science (2020)	Brief relaxation breaks improve working memory, decision-making and overall cognitive performance.
	Journal of Bodywork & Movement Therapies (2021)	Massage therapy reduces muscular tension, enhances circulation and promotes faster physical and mental recovery.
	Environmental Health & Preventive Medicine (2015)	Exposure to nature-based environments (even digitally) reduces tension and stress, promoting psychological restoration.
	Journal of Airport Management (2019)	Passengers who were offered relaxation services reported higher levels of satisfaction and loyalty within airports.
	Journal of Service Research (2018)	Airport amenities that enhance passenger experience—such as relaxation spaces—can drive additional revenue streams and improve perception.
	Journal of Environmental Psychology (2010)	Exposure to calming environments and therapeutic massage significantly improves comfort and relaxation, leading to a more pleasant travel experience.
	Frontiers in Psychology (2017)	Sound exposure reduction and sensory modulation lead to higher levels of engagement, well-being and life-satisfaction.
	Sleep Medicine Reviews (2016)	Aromatherapy interventions, particularly with lavender, help reduce sleep disturbances and improve sleep quality.
	Journal of Alternative & Complementary Medicine (2013)	Short massage sessions significantly reduce anxiety levels in participants. Across clinical and non-clinical groups, massage improves mood and well-being.
	Journal of Traditional Chinese Medicine (2016)	Shiatsu massage can enhance circulation and stimulate the immune system, thus improving overall health and reducing the risk of illness.
